

Visit to Research Park, IIT Delhi

Department of Microbiology, Ram Lal Anand College

“It is said that one gains knowledge not just from books but also from exploration and adventure.”

Department of Microbiology, Ram Lal Anand College, University of Delhi on 30th January 2023 conducted an exploration session for the students of B.Sc (Hons) microbiology II year and III year to IIT Delhi’s Research Park (Biotech incubation center) with an aim to help students explore the area of innovation and experiment.

Biotech incubation center of IIT Delhi was established in the year 2000, is an industrial organization that is often referred to as FIIT (registered in 1992) and aims to connect corporate organizations with academic institutions and provide innovative mind within these institutions the needed guidance and support to transform their vision into reality.

At the onset, the students were given a basic idea about the working and history of FIIT and ATAL INCUBATION CENTER in Sonipat (an extended branch of FIIT) that is associated with catering to those startups that are in their ideation state. We were told that the Research and Innovation Park we visited at that moment catered to approximately 30 startups. Over the years they have worked with multiple startups and they have more than 1500 registered patents. We were delighted to know that the Research and Innovation Park of IIT Delhi was the largest incubation center that at present runs 27 programs. We were provided insight on how can we nurture a innovative idea within our minds and the various stages that a idea has to pass through in order to be catered by institutions like that of FIIT Delhi. The FIIT representative Ms. Prabal Kaur talked about what grants are provided by various corporate organizations that are associated with FIIT Delhi and how students at undergraduate level can benefit from these.

Next the talk was on the various programs that FIIT Delhi runs like the Meity Samridhi, NIDHI, Startup Residency programs. We were told more about then like the levels at which they cater to a particular idea and the ways in which these benefit an individual.

We visited the mechanical lab of the Incubation center where we saw some of the equipment’s that individuals working in the startups use and also had the privilege to meet and briefly interact with the CEO of DRONE ADDA which basically is a drone parts manufacturing company and the catch is the fact that Drone Adda is the first company of its kind in India.

The visit truly was an opportunity to widen our horizon and explore an entirely new aspect of innovation.
