

**Solid Waste Management Including Biowaste  
Ram Lal Anand College**

**Session: 2022-2023.**

Solid Waste Management Including Bio-waste worked towards the sustainable goal by ensuring proper disposal of solid waste generated in the college. The committee restored the composting machine (which was not used during the COVID-19 lockdown period and was out of order) to working condition and ensured that the organic waste generated in the canteen area and the garden is mixed with commercial bio inoculum and de-odorant and subjected to composting in the machine and then cured for proper time period in the composting trays.

To reduce the generation of solid waste in the form of disposable glasses, ceramic cups were kept in the pantry for use by the faculty member. On the persuasion by the committee some of teachers brought their own cups and started using them for tea, water etc.

The committee also ensured that the bio waste generated in the laboratories such as Microbiology was properly disposed of through an agency in timely manner to avoid any kind of biohazard.
